Social Accounting & Open Access
Rethinking the value chain & what counts in scholarly communication
Social Accounting & Open Access

- Brief introduction & overview
- Funding models (old & new)
- Rethinking what counts and how to fund OA initiatives
- Success so far
- Challenges & Opportunities
- Conclusions
“Scientific findings do not belong to a country but to the whole world…”

Hernan Riquelme, Editor
Agricultura Técnica (Chile)
July, 2008
Bioline International - Mission

- Reduce the South-North knowledge gap
- Provide a sustainable platform for the dissemination of journal materials
- Improve the visibility of developing world publications
Active journal participants graphed with Google maps
“Bioline has contributed both to timely publication of articles from developing countries and also to the sustainability of the journals concerned... Of course for Bioline International (and other similar Open Access services) to continue their work, they need financial support from philanthropic organizations and foundations and the private sector...”

Joses M Kirigia
July, 2008
Previous Funding Models

- Pay “per-view”
- Institutional subscriptions
- University of Toronto support
- Occasional Grants
Premise of new model

- Building a distributed support model
- Evaluation of different sustainability models
- Demonstrating “added value” with new accounting framework
- Creating new partnerships through sponsorship and membership support
“The more successful open access becomes, the more irrelevant our traditional view of library budgets will be... It would be truly unfortunate if the open access movement passed librarians by because we were too busy worrying about the library's bottom line.”

Social Accounting

- Scholarly journals as “merit good”
- Broadening the definition of “success” and “value”
  - Traditional value: economic return
  - Scholarly value - reputation and citation
  - Institutional value - public mission
  - Social value - equity, participation, diversity
  - Political value - evidence based policy, transparency, accountability
... Accounting for social impact

- What counts as “input”, cost or investment
- What counts as “output” or benefits and impact
Bioline has provided a very important and instant platform for journals like African Health Sciences to reach a very wide audience... While we are on Pubmed central, the availability has been problematic because for example only 3 of 4 issues are currently on PUBMED Central. Bioline does not require us to do expensive and laborious XML and other conversions. Bioline also provides us with regular feedback on access to African Health Sciences. To us interested in unrestricted access to knowledge and information generated by African scientists, Bioline has provided a very reliable, sustainable partner.

We do value your service greatly knowing that even the remotest health worker with internet access can read our journal instantly free online. Keep it up!

James K Tumwine, Founder Editor in Chief,
African Health Sciences
Makerere University, Uganda
“Too often we think of scientific knowledge and the developing countries in terms of what “we” can do for “them”. We need to nurture the organizations and initiatives that challenge this limiting point of view, enriching the international scholarly community with important research and neglected perspectives from the developing world.”

Lynne Copeland, Dean of Library Services & University Librarian, Simon Fraser University Library, Canada.

Success so far: Journal Applications

Rate of journals applying to Bioline by budget year
“Bioline... has been an invaluable resource for us. It is our hope that this resource will be sustained into the future, and expanded to accommodate more desiring journals in our setting. ...”

Emmanuel A. Ameh, Assistant Editor
Annals of African Medicine
July, 2008
Challenges & Opportunities

Questions from potential supporters:

- Why pay for Open Access?
- How is a membership different from a subscription?
- What’s in it for “us”?
- Why should “we” subsidize the “other”?
The role of research libraries

- No longer just buyers of “content”
- Partners in the creation of “merit goods”
- They are also “funders” of scholarship
- Collection development as strategic investment
- Supporting fee as “investment” and “symbolic capital”
Conclusions

- There is a clear need for a different framework for accounting when it comes to open access, especially when it comes to publications from the developing world.
- Also need to rethink “what to count”, and how we support what we value collectively.
